

# TABLE OF CONTENTS

	Page Number
Final Report – Hydrogen Research at Florida Universities	1
Abstract	1
Program Summary	1
Concluding Remarks	16
Acknowledgements	16
One Page Summaries	17
Ammonia-Borane Complex for Hydrogen Storage	19
Ceramic Membranes of Mixed Ionic-Electronic Conductors For Hydrogen Separation	20
Compact, Lightweight, and Optimized Fuel Cells for Space And Aircraft Power	21
Gas Permeable Chemochronic Compositions for Hydrogen Sensing	22
Hydrogen Education and Outreach	23
Hydrogen Production from Used Lubricating Oils	24
Hydrogen Production via Solar Thermochemical Water Splitting	25
Hydrogen-Powered Aeropropulsion: Compact, Lightweight and Efficient Fuel Cells for Space Power	26
Integrated Fuel Cell Test Bed Facility	27
Liquid Hydrogen Storage at Kennedy Space Center	28
Local Hydrogen Production via Catalytic Reforming of Fossil and Renewable Feedstocks	29
Photoelectrochemical Water Splitting for Hydrogen Production Using Multiple Bandgap Combination of Thin-Film-Photovoltaic- Cells and Photocatalyst	30
System Analysis of Hydrogen Production and Utilization at KSC	31

Zero-Boil-Off Liquid Hydrogen Storage Tanks	32
A Reliable, Efficient and Compact Reverse Turbo Brayton Cycle (RTBC) Cryocooler for Storage and Transport of Hydrogen in Spaceport and Space Vehicle Applications	33
Development of Cryogenic Shape Memory Actuator Materials For Switches, Seals and Valves	34
Genetic Engineering to Enhance Biological Hydrogen Production	35
Highly Selective Nano-Mems Low Temperature Hydrogen Sensor	36
Metal Hydrides for Hydrogen Separation, Recovery and Purification	37
Wireless Passive Sensors and Systems for Physical Sensors and Hydrogen Sensing Applications	38
Densified LH <sub>2</sub> and LO <sub>2</sub> : Transport Properties and Density	39
Experimental and Numerical Investigations of Cryogenic Multiphase Flow	40
Improved Hydrogen Yield from Florida Specific Biomass Gasification Using a Pilot Scale Gasification Unit	41
Numerical Simulation Model for Thermo-Fluid Analysis of Cryogenic Storage Systems with Zero Boiloff	42
Prototype and Simulation Model for a Magneto-caloric Refrigerator	43
Smart Porous Metal-Organic Frameworks (MOFs) for Hydrogen Recovery and Storage	44
Surface Acoustic Wave (SAW) Sensors for Hydrogen and Other Gas Detection	45
Thermo Catalytic Hydrogen Production Via Oxygen-Free Methane Aromatization	46
Modeling and Optimization of Fuel Cell Systems for Aircraft Applications	47
Final Reports for Florida Solar Energy Center	48
Ammonia-Borane Complete for Hydrogen Storage	49
Ceramic Membranes of Mixed Ionic-Electronic Conductors For Hydrogen Separation	72

Compact, Lightweight, and Optimized Fuel Cells for Space and Aircraft Power	105
Gas Permeable Chemochromic Compositions for Hydrogen Sensing	132
Hydrogen Education and Outreach	148
Hydrogen Production from Used Lubricating Oils	157
Hydrogen Production via Solar Thermochemical Water Splitting	171
Hydrogen-Powered Aeropropulsion: Compact, Lightweight, and Efficient Fuel Cells for Space Power	195
Integrated Fuel Cell Test Bed Facility	223
Liquid Hydrogen Storage at Kennedy Space Center	227
Local Hydrogen Production via Catalytic Reforming of Fossil and Renewable Feedstocks	250
Photoelectrochemical Water Splitting for Hydrogen Production Using Multiple Bandgap Combination of Thin-Film-Photovoltaic and Photocatalyst	289
System Analysis of Hydrogen Production and Utilization at KSC	304
Zero-Boil-Off Liquid Hydrogen Storage Tanks	333
Final Reports for University of Central Florida	344
A Reliable, Efficient and Compact Reverse Turbo Brayton Cycle (RTBC) Cryocooler for Storage and Transport of Hydrogen in Spaceport and Space Vehicle Applications	345
Development of Cryogenic Shape Memory Actuator Materials For Switches, Seals and Valves	404
Genetic Engineering to Enhance Biological Hydrogen Production	429
Highly Sensitive Nano-Mems Low Temperature Hydrogen Sensor	453
Metal Hydrides for Hydrogen Separation, Recovery and Purification	472
Wireless Passive Sensors and Systems for Physical Sensors And Hydrogen Sensing Applications	485

Final Reports for Florida State University	525
Densified LH <sub>2</sub> and LO <sub>2</sub> : Transport Properties and Density	526
Experimental and Numerical Investigations of Cryogenic Multiphase Flow	551
Final Report for Florida International University	558
Improved Hydrogen Yield from Florida Specific Biomass Gasification Using a Pilot Scale Gasification Unit	559
Final Reports for University of South Florida	595
Numerical Simulation Model for Thermo-Fluid Analysis of Cryogenic Storage Systems with Zero Boiloff	596
Prototype and Simulation Model for a Magneto-Caloric Refrigerator	609
Smart Porous Metal-Organic Frameworks (MOFs) for Hydrogen Recovery and Storage	631
Surface Acoustic Wave (SAW) Sensors for Hydrogen and Other Gas Detection	651
Thermo Catalytic H <sub>2</sub> Production via Oxygen-Free Methane Aromatization	663
Final Report for Florida A & M University	675
Modeling and Optimization of Fuel Cell Systems for Aircraft Applications	676
Appendix A	700
